GECO binoculars

The field glasses in the GECO line provide the perfect entry to the world of high-quality binoculars in unbeatable value for money. The slender and ergonomic design was combined with the use of high-quality materials. The housing is made entirely of magnesium. The scope delivers a large field of view, sharp edge definition, high transmission values and a great short focus thanks to ED glass, multilayer coating and an adjusted optic calculation. These models stand out from their competitors thanks to their robustness, low weight and optical performance. All products come with a tripod connection, a shoulder strap and a hard case.

GECO binoculars for hunting are available in 8x and 10x magnification.
