

GECO 10x56

Item no. 2403729

The high-performance binoculars enable relaxed observations thanks to wide fields of view and large exit pupils. Another advantage of the observation optics are the high transmission values, which ensure bright and high-contrast images even in dark conditions.

Properties

<i>Length (mm)</i>	192
<i>Weight (g)</i>	1200

GECO binoculars

The field glasses in the GECO line provide the perfect entry to the world of high-quality binoculars in unbeatable value for money. The slender and ergonomic design was combined with the use of high-quality materials. The housing is made entirely of magnesium. The scope delivers a large field of view, sharp edge definition, high transmission values and a great short focus thanks to ED glass, multilayer coating and an adjusted optic calculation. These models stand out from their competitors thanks to their robustness, low weight and optical performance. All products come with a tripod connection, a shoulder strap and a hard case.

GECO binoculars for hunting are available in 8x and 10x magnification.
